

DATA PROTECTION PROGRAM:

Know Where Your Data is. Know That It's Secure.

GET THE BENEFITS OF THE CLOUD WHILE PROTECTING YOUR DATA

The cloud and SaaS tools leave you more susceptible to both accidental and intentional disclosures of sensitive data by employees, partners, and threat actors.

With the ECS Managed Data Protection Program, you can protect your intellectual property, personally identifiable information, and financial information, while your organization accesses the web and cloud apps it needs. We help you protect your workforce from threats, satisfy regulatory requirements, and avoid becoming the next data-breach headline.

COMPLETE VISIBILITY, GRANULAR CONTROL

The ECS Managed Data Protection Program gives you complete visibility into the location of your data and granular control of your cloud apps. It gives you the ability to:

- *Identify where and how your sensitive data is stored and protected.*
- *Stop the removal of sensitive data from your corporate environment through file sharing, copy-and-pasting, USB drives, email, or other means.*
- *Maintain compliance.*

Identify All Your Risks

We interview your business unit leaders and data governance stakeholders to understand your business objectives and identify your data handling and storage requirements.

Create and Enforce the Right Data Policies

Our data loss prevention (DLP) experts use best practices to implement, monitor, and enforce data policies that serve your specific business needs.

Get Continuous Monitoring and Enforcement

ECS monitors and enforces DLP policies to identify data sharing across your on-premises and cloud environments and detect insider threats and compromised accounts.

Retain Access and Custom Reporting

As co-manager of your DLP program, you retain access to run your own reports and leverage all the benefits of a mature DLP program, without the usual complexity.

Quick Time to Value

ECS will operationalize your data protection program quickly and deliver the outcomes you expect from your DLP solution.

The ECS Data Protection Program is about protecting information for our customers, employees, and consumers. We're all stakeholders in data breaches. By helping our customers create and enforce these complex and difficult-to-maintain data protection policies, we're providing necessary monitoring and protection.
